

Sage Pro ERP

Sage Credit Card Processing

A convenient payment processing solution, Sage Pro ERP Credit Card Processing powered by Sage Payment Solutions module gives Sage Pro ERP customers the benefit of comprehensive business management coupled with the benefit of credit purchase processing—all from Sage. What's more, having all payment processing in-house with Sage Payment Solutions enables Sage to pass savings onto customers, resulting in a lower total cost of ownership.

Studies show that more and more purchases are being made with credit cards each year, and vendors accepting credit cards increase their sales by 15 to 50 percent. Sage Pro customers can take full advantage of this opportunity with the ease and efficiency offered by fully integrated credit payment processing.

Credit Card Processing powered by Sage Payment Solutions provides a complete credit card processing solution for mail and telephone orders, including corporate purchasing cards. Data can be entered through the Sales Order and Accounts Receivable modules, and transactional information, such as authorization codes, is captured and stored for historical and reconciliation purposes.

BENEFITS

- Automatically connects to Merchant Accounts for credit card authorizations and settlements
- Process payments using Sales Order and Accounts Receivable modules
- Complete, secure, 24/7 online transaction reporting
- Stored credit card numbers are encrypted
- Compliant with Visa and MasterCard Payment Card Industry (PCI) data security standard
- Multiple address verification options add an additional layer of credit card authentication
- User-level password protection combined with strict adherence to PCI security standards helps ensure your system is secure
- Eliminates manual data entry and reduces the risk of errors
- Integrates payments with business management software
- PA-DSS* certified payment applications
- Improves cash flow
- Reduces fraud exposure

Works the Way You Do

Sage Credit Card Processing by Sage Payment Solutions adds functionality in key areas of Sage Pro Sales Order and Accounts Receivable.

Address Verification Services

Address verification services add another layer of credit card authentication by comparing the purchaser's billing address with the billing address on record.

User-Level Password Protection

The system's password and privilege level increase the security of customer card numbers and information by reducing the possibility of unauthorized access into database content and functions.

Data File Encryption

The system's data file encryption capabilities further increase the security of customer data by ensuring credit card account numbers are encrypted.

Merchant Account-Provided Solutions

Sage Payment Solutions has made it easy for businesses to accept electronic payments for more than 17 years. Funds collected from credit card transactions are automatically deposited into your existing business bank account.

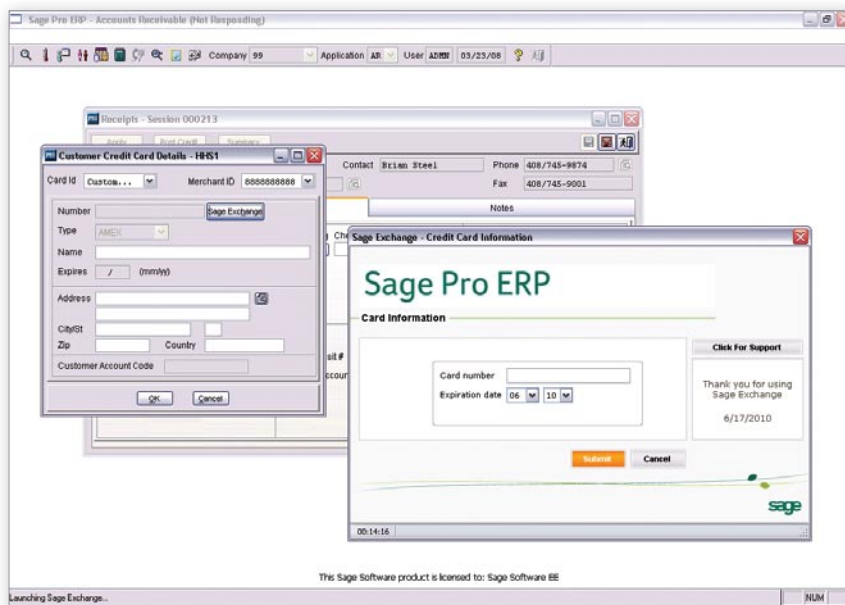

Scrub Utility

Complying with PCI standards, the Scrub Utility is a one-time utility that will securely delete any sensitive credit card data from the Sage Pro system.

Online Reporting

Secure online access to all your key transaction information is included for your merchant account, 24/7.

This payment platform is a versatile PA-DSS*-certified environment that facilitates the exchange of payment data to and from business software and related applications. Your organization can feel confident in accepting credit and debit cards through an ultrasecure payment platform while automatically updating your business management system with valuable data from each transaction.

Integrating your Sage Pro ERP payment data with Sage Exchange is an easy yet powerful business management solution that:

- Saves your business time, money, and risk exposure.
- Helps you get paid more quickly and make payments more efficiently.
- Improves cash flow management.

*PCI Security Standards Council standard for payment applications
